

## Mobius® Wound Protection Retractors Improve Exposure, Safety and Efficiency

### Mobius®

The Mobius Retractors provide 360° circumferential retraction while the malleable outer ring molds to the patient's abdomen to provide a secure, low-profile exposure.

- Continuous elastic tension helps maximize the diameter of the working area to provide greater exposure than conventional retractors
- Protects wound edges minimizing contamination<sup>1,2</sup>
- Extremely versatile, Mobius can assist in a variety of procedures including hysterectomy, cystectomy, oophorectomy, C-section and more

<sup>1</sup>Minimally Invasive Cesarean: Improving an Innovative Technique. Pelosi & Pelosi, OBG Management, July 2004

<sup>2</sup>The Use of the Mobius® Self-Retaining Retractor in Cesarean Deliveries— A Retrospective Case. Finck, MD & C Della Badia, Poster, AAGL 33rd Annual Meeting, Nov. 2004
