LiftUp®. The durable solution.

LiftUp® creates a submucosal gel cushion at body temperature due to its thermoreversible properties. It is a new injection solution for safe and easy¹ endoscopic resection, such as polypectomy, EMR and ESD. The pronounced safety cushion lasts even after mucosa incision.²

Tissue layers and structures are well separated and exposed, thereby facilitating the resection procedure. The long-lasting lifting makes re-injection less necessary and saves time.³ Each vial contains 20 ml of LiftUp® pre-mixed with methylene blue and is ready-to-use.
